## About

Strong visual communicator with technical skills to interpret data and design sense to make it intuitive and engaging. Interested in using data visualization to find hidden stories and promote public understanding of complex ideas.

## Experience

### Chicago Policy Review

#### Data Visualization Editor, Urban Affairs

October 2015 - Present

Work with writers and editors to develop complimentary infographics and data visualizations for articles in Urban Affairs.

#### Web Developer

January 2016 - Present

Manage and make adjustments Chicago Policy Review website as requested. Collect analytics data and strategize for redesign to increase visit duration. Address technical issues encountered by CPR staff.

### Urban Innovation Analysis

#### Graduate Research Assistant

July 2015 - Present

Analyze neighborhood-level data for Korean, Japanese, and Chinese cities as a part of a project to understand the connection between cultural scenes and economic growth in cities around the world. Lead small team of Asia-focused undergraduate researchers.

### Target Corporation

#### Merchandise Presentation Analyst Intern

June 2012 - August 2012

Developed templates for merchandise presentation in Target's home goods department. Secured buy-in of stakeholders at all levels of the home goods department. Presented visual merchandising templates and method for use at meeting of the home goods department.

### Exhibition Development Group

#### Project Management Intern, Traveling Exhibitions

March 2012 - August 2012

Created publicity materials to market traveling exhibitions to museums. Communicated with vendors to obtain exhibition materials. Assisted with managing logistics for exhibitions currently on tour.

## Other Projects

### BallotReady

#### Data Processing Application

January - February 2016

Created back-end of application to automate processing files received from Amazon Mechanical Turk into format needed for next phase of research.

### Academic

#### CityFinder Application

In Progress

Creating front-end of application to take user preferences and priorities about where they would like to live and generate a list of cities that match their preferences as well as a data visualization showing the location of the cities and the degree to which each city matches their preferences. Also allows users to compare cities by such factors as weather and walkability through an interactive data visualization.
